EDUCATION

University of Georgia, *Morehead Honors College*, 3.7 GPA

Athens, GA

B.S. Computer Science

Expected Graduation – May 2028

Coursework: Data Structures, Algorithms, Software Development, Computer Networks, Operating Systems, Computer Architecture, Systems Programming, Discrete Math

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, Swift, HTML, CSS, React, Angular, Next.js, Flutter, React Native, C++

Frameworks: React, Node.js, Next.js, Angular, Django, React Native, Flutter, Expo

Tools: MongoDB, MongoDB Atlas, PostgreSQL, Firebase, GraphQL, Kafka, Auth0

WORK EXPERIENCE

Adobe

San Jose, CA

Incoming Software Engineering Intern | Developer Platforms

May 2026 – August 2026

NCR Voyix – (React Native, React, GraphQL, Expo)

Atlanta, GA

Software Engineering Intern

May 2025 – August 2025

- Developed a full-stack e-commerce loyalty application platform for an all-inclusive ordering service
- Integrated a GraphQL API into a React Native frontend for a responsive e-commerce mobile application
- Testing and deploying across iOS, Android, web and kiosks using one code base for 4 platforms

Novae – (Spring Boot, Angular, MongoDB, Charts.js, Kafka)

Markle, IN

Software Engineering Intern

June 2024 – July 2024

- Developed a real-time analytics tool to read and parse 1M+ logs from company files, sending them to Kafka
- Processed logs via Kafka, stored in MongoDB using a Spring-based consumer
- Queried data from a Spring backend, with an Angular frontend handling API calls for user-driven analysis
- Implemented trend analysis features including average, outlier detection, and search functions for log data

Translational Glycomaterials and Neural Repair Lab

Athens, GA

Undergraduate Researcher

August 2024 – May 2025

- Focused on finding and implementing preprocessing algorithms for data segmentation
- Developed computational imaging models for Deep Imaging Research Projects, analyzing TBIs over time
- Researched neural imaging papers and modifying algorithms to apply to images for ongoing research

PROJECT EXPERIENCE

AlphaTest – (Python, FastAPI, PostgreSQL, pandas)

- Building a backtesting engine in python supporting multiple trading strategies including SMA crossover and RSI
- Designing a FastAPI backend to accept strategy configurations, run backtests against historical OHLCV data
- Designing a Streamlit dashboard visualizing equity curves, trade history and performance breakdowns across strategies

Bites – (Spring Boot, React, PostgreSQL, Docker, Kubernetes)

- Building a microservices food delivery platform with services for users, restaurants, etc. containerized with Docker
- Deploying Services to Kubernetes, authoring manifests for Deployments, StatefulSets, ConfigMaps, and Redis queue
- Configuring autoscaler to dynamically scale order and notification pods under load, calidated with simulations

Fake News Detector with Explainable NLP – (Python, PyTorch, Hugging Face, LIME, SHAP, Streamlit)

- Developed an NLP pipeline using BERT embeddings and fine-tuned classification models to detect misinformation
- Implemented LIME/SHAP explainability methods to highlight key phrases influencing classification decisions
- Built an interactive Streamlit web app, enabling users to input articles and receive predictions

QuikTrade – (Spring Boot, SwiftUI, PostgreSQL)

- Built a stock market analytics tool for users at beginner, intermediate, and advanced levels
- Created a Spring Boot backend for API calls, data parsing, and PostgreSQL storage
- Focused on a SwiftUI frontend to display market data and trade strategies based on user knowledge level
